

IN-HOUSE TESTING

We know that our on-site services are not practical for everyone and that is why Ranger offer drop and collect services from Ranger HQ.

Our head office is located between the junctions of all Sydney's major arterial freeways and nestles right between the M4 & M7 motorway.

**DROP +
COLLECT**

Drop off your equipment at Ranger HQ and our NATA accredited team will inspect your equipment to the applicable Australian Standard. We'll notify you regarding any failed items and the requirement to bring the equipment back up to Standard.

Our repair before replace policy and stock on hand means you can be back up and running with little downtime.

The current Australian Standard requires a proof test to be applied to some repairs of chain slings which we will perform on our in-house test bed.

Your equipment will be tagged and entered into our e-Testinspect online asset register system which is accessible 24/7 and allows you to view your register and print reports of thorough examination when it suits you.

The Ranger team will then advise that your equipment has been re-certified to Australian Standards and is ready for pick up.

When you need your equipment back urgently try our *Express Drop + Collect* service.

Popular with clients who need their equipment back in a hurry, our express service offers:

- Priority in the inspection queue
- Express Register & Reports
- Printed Report & Thorough examination Certificates

Where possible our express services will be completed in a 4 hour window.

Prior to commencing work you will be given a quote based on your specific requirements and a service timeframe will also be discussed.

Where possible our express services will be completed in a 4 hour window.

Notify us at drop off if NATA certification is required.

A black and white photograph of various tools including a hammer, a screwdriver, and a wrench, with a white text box overlaid in the center. The tools are arranged in a pile, with the hammer at the top, the screwdriver in the middle, and the wrench at the bottom. The text box is a simple white rectangle with a thin black border, containing three lines of text.

We know that on-site services are not practical for everyone and that's why our drop and collect and express in-house services are designed to be just as convenient.
